

## AMARYLLIS

*Hippeastrum*

### PLACEMENT

- Near a well-lit window (ideally east or west exposure)
- Away from direct heat sources (65–70°F room temperatures are best)
- On a protected surface (to prevent potential moisture damage to furniture)

### WATER

- Upon arrival: Moderately with lukewarm water
- Before buds appear: Water sparingly, keeping soil slightly moist
- After buds and leaves appear: Gradually water more (a few times a week)
- Avoid overwatering. Soil should not be soggy.

### REBLOOMING

- After initial bloom period, cut the flowering stalk to an inch or two above the bulb, keeping the leaves intact.
- Transplant to a slightly larger pot with drainage holes, keeping original soil around the bulb.
- Water as needed, when soil dries out. (We recommend adding a water-soluble fertilizer once a month.)
- After danger of frost has passed in late spring, move potted amaryllis outdoors to a semi-shaded location. (You may also transplant to the garden if you prefer.)
- In late summer, discontinue watering and fertilizing to allow the foliage to wither.
- In the fall, cut off the dried leaves and move the amaryllis back indoors. (Repot if needed.)
- Store in a cool, dark area for 6–8 weeks.
- After resting period, move to a warm, well-lit area and resume watering once growth begins.

## WAXED AMARYLLIS BULBS

The easiest plant you'll ever grow, your Waxed Amaryllis doesn't even need water. Just place it on a flat surface in bright, indirect sunlight and in 3–6 weeks, a bouquet of blooms will appear.

Waxed Amaryllis bulbs contain all the water and nutrients needed for a single bloom cycle and should be discarded after blooming.

*Note: Your package may contain disposable heat packs to prevent bulbs from freezing during shipment. Please discard.*

## NAKED AMARYLLIS BULBS

### PLANTING

- Choose a container 6–8" in diameter.
- Use a well-draining soil mix. We recommend equal parts loam, sand and compost.
- Plant bulb (tapered side up), keeping top 1/3 of the bulb above the soil.

See the instructions in this guide for amaryllis placement, watering and reblooming.
