

Shrubs Alive!™ for Trees and Shrubs

All-Natural Fertilizer (4-3-5)

Application Instructions

New plantings:

- With a new shrub or tree, add ½ cup to the hole at planting time. Water the fertilizer into the soil thoroughly. Then place the plant in the hole.

Existing plantings:

- For small shrubs, broadcast the fertilizer around the shrub bed applying at a rate of 2½ lbs. per 100 sq. ft., and scratch into the top 2 in. of the soil. Be careful not to disturb the roots. If the roots are shallow, water the fertilizer into the soil instead of scratching.
- For larger trees and shrubs, broadcast under the rain drip canopy of each individual tree or shrub, applying at a rate of 2½ lbs. per 100 sq. ft. Water the fertilizer into the soil thoroughly.
- For optimum results, apply twice per season—first in early spring and again in early August.
