

All-Ways Greener™ Brand Grass Seed Mix

All-Ways Greener Brand Grass Seed Mix is a combination of six drought tolerant and premium quality lower growing varieties of grass seed. This specialty mix is disease resistant, summer stress & drought tolerant, and requires little or no mowing. The end result is a lush, medium dark green, fine textured lawn that is low maintenance and better for the environment.

SEED BED PREPARATION: Plowing or spading followed by discing and hand raking are the best methods. Rotary tillers may also be used. Work soil to a fine, granular texture. If any clods are left, rake them off the seed bed. Seed does best if planted in full sun to partial shade.

SEEDING: Recommended seeding times are from early to mid spring and late summer to early fall. Seed at a rate of 6 pounds per 1,000 square feet. Grass is best sown with a drop or rotary spreader. To obtain a uniform stand of turf, sow at 1/2 the recommended rate in one direction then sow the other 1/2 crosswise to the first sowing. This will prevent "rows". When seeding on bare ground, it is best to cover the grass seed with straw, hay, compost or other "fine" covering. This will maximize germination. With regular watering, emergence will occur in 7-10 days.

TO OVERSEED: Sow at the rate of one or two lbs. per 1,000 sq. ft. (more if existing grass is very thin). For best results, cover with a thin layer of top soil or aerate with a power aerator so that seed will be mixed with soil. Germination will be poor if seed is sown over existing lawn and is left exposed on the soil surface. If left exposed, apply at the rate of six lbs. per 1,000 sq. ft.

During establishment regular watering and application of fertilizer will expedite establishment. Once established, All-Ways Greener Brand Grass Seed Mix requires little or no maintenance or watering. This specialty mix tolerates low cutting heights or can be left un-mowed for a soft, swirling pattern that reaches a height of 8-18". For a more manicured look mow approximately once a month or as desired.

NOTE: Do Not Use Where Ruminants And Horses May Feed.

Net Weight: 6 LB.
