# Next Step™ Fertilizer

## for Seed Starter Kit

### 2-3-2

Next Step Fertilizer is designed to give your plants the boost they need as they are growing in your seed starting trays.

Information regarding the contents and levels of metals in this product is available on the internet at <http://agr.wa.gov>.

**MIXING INSTRUCTIONS:** Mix 2 teaspoons of Next Step with 1 gallon of water. For smaller or larger batches, use a similar ratio (for example, mix 1 teaspoon of Next Step with ½ gallon of water, or mix 4 teaspoons of Next Step with 2 gallons of water). Make only as much as you will need for two weeks.

#### **DIRECTIONS FOR USE:**

1. Two weeks after starting seeds, add Next Step fertilizer solution to the seed starting tray instead of water. (There is no need to remove any water already in the tray; over time, the fertilizer solution will replace the water.)
2. Continue to use until you are ready to grow the transplants outdoors.
