

6910 6911 Quik-Cal™ Pelletized Calcium Product Info.

Increases sugar content of apples, enhances growth, prevents calcium deficiency!

A simple soil test will tell you if your soil shows a calcium deficiency. Insufficient calcium is a common problem that leads to weak cell structure and lowers the quality of the fruit.

Prevent bitter-pit in apples, a disorder associated with calcium deficiency. Apply Quik-Cal™ Pelletized Calcium to increase the sugar content of your fruit crop and ensure good tree growth as it also acts as a catalyst to most other plant nutrients.

Easy to use, our Quik-Cal™ Pelletized Calcium is a granulated form of calcium carbonate. It should be applied at planting time at the rate of 2 oz. per new, young transplant.

For established trees, scatter 2 lbs. at the drip-line of the tree, annually in spring.

6910 5 lb.

6911 10 lb.
