

8360 8361 Houseplants Alive! Foliage Product Info.

Houseplants Alive! Foliage

Houseplants Alive! for foliage plants is 100% organic food for potted plants and provides nutrients for the plant and the soil.

Ingredients:

Houseplants Alive! for foliage plants is made from plant and animal by-products.

Uses:

Houseplants Alive! for foliage plants is used to restore soil fertility and feed potted plants.

It may also be used to fertilize Blackberries, Raspberries, Blueberries and Ornamental Trees.

Houseplants Alive! for foliage plants provides immediately available plus slow-release nutrients to provide a complete diet for houseplants and helps rebuild the soil.

Application:

Timing—apply Houseplants Alive! to the soil of potted plants every 2-3 months. It may also be mixed with potting soil when repotting.

Physical—for plants in 6” or smaller pots, scratch 1 teaspoon into the soil surface. For pots 6” to 12”, scratch 1 Tablespoon of Houseplants Alive! into the soil surface once a month.

For re-potting, mix Houseplants Alive! into the potting mix at a rate of 1 Tablespoon per quart of soil.

Note:

A week or two after applying fertilizer a “mold” growth may appear on the surface of the soil.

This is a result of the biological activity going on and is harmless. If you prefer not to see the “mold” simply scratch the surface of the soil and the mold will disappear.

Note:

Use Sea Rich for an added boost to houseplants between scheduled Houseplants Alive! applications.

It is important to fertilize houseplants as they have special needs. The soil in potted plants cannot restore fertility naturally.

Benefits:

Improve soil texture. Restore fertility to potted plant soil. Neutralize salts. Soil moisture retention.

Provide vigorous growth and healthy plants.
