

100% Pure Earthworm Castings Traditional & Natural Soil Conditioner

Earthworm castings encourage vigorous plant growth and improve aeration and water retention capacity of soil. Use liberally to improve soil beds for vegetables, annuals, perennials, shrubs and lawns. Also excellent in potting mixes for houseplants. Dry formulation is easy to use and will not "burn" even delicate seedlings.

Application Instructions

- **Vegetables and Annual Flowers:** Line bottom of plant holes and seed furrows with 1-2 in. of worm castings. Set seeds or plants in place and cover with soil. Once every 2 months during the growing season, side-dress at the rate of ½ cup per plant or 1 cup per linear foot of row.
- **Perennials:** Work ½ cup into the soil above the root zone, taking care not to damage shallow roots. Apply in early spring, early summer and early fall.
- **Potted Plants and Seeds/Seed Flats (New) Potting Mix:** Use 1 part worm castings to 2 parts soil.
- **Potted Plants, Window Boxes or Hanging Baskets (Established):** Add ½-1 in. worm castings to top of soil. Mix in, taking care not to damage shallow roots. Water. Repeat every 2 to 3 months.
- **Roses, Trees, Shrubs and Berries (New or Freshly Transplanted):** Mix 1 part worm castings to 2 parts soil. Surround newly dug hole with mixture. Spread roots over a mound of the mix in the hole and cover.
- **Roses (Established):** Mix 4 cups worm castings into soil 2-3 in. below the surface of each plant.
- **Lawns (New):** Apply 10 lbs. per 100 sq. ft. Work 1-2 in. into topsoil. Mix in grass seed and water well.
- **Lawns (Established):** Distribute as a top-dressing at the rate of 4 lbs. per 100 sq. ft.
- **Compost Piles:** Spread a thin layer of worm castings between each new layer of material to be composted.
- **Liquefied Castings:** Soak 1 part worm castings in 2 parts water for at least 1 week. Castings tea watering is excellent for fruiting, flowering or difficult to access potted plants.

Ingredients: 100% Pure Earthworm Castings
