

SEEDMASTER®

For controlled sowing of a variety of seeds and fertilizers
for indoor and outdoor uses

Developed for gardeners to spread, dispense,
distribute seed and fertilizer evenly and accurately.

Easy to Use!

- Insert the appropriately sized seed baffle into the slots in the seed tray. See chart on back to determine proper baffle. The seed baffle proportions the seed flow, permitting faster seeding.
- Just place seed in broad part of trowel, tilt dispenser unit slightly forward.
- Use thumb to lightly rotate wheel. Impulses propel seed evenly off tip, right where you wish to sow them.
- Stronger thumb pressure on the wheel causes vibrating action to increase.

Should very small seeds cling to the plastic trowel, wipe with solution of household detergent and allow to dry.
