

Mole-Relief™

Dry Mole Repellent

- Easier to apply
- Works with all spreaders
- Biodegradable
- Won't yellow lawns or foliage

Easy to apply by hand, broadcast or drop spreader directly onto wet or dry soil. Granular formula. Not harmful to birds, pets or plants.

Mole-Relief™ Dry Mole Repellent effectively rids lawns, gardens and other soil areas of moles from early Spring through late Fall.

Active Ingredient:

Castor Oil USP or equivalent 19.5%
Sodium Lauryl Sulfate 4.5%

Inert Ingredients:

Corn Cob Granules..... 76.0%
Total 100.0%

CAUTION

KEEP OUT OF REACH OF CHILDREN

WHEN AND WHERE TO USE: Apply as directed below when tunnels or cone-shaped mounds appear in soil from early Spring through late Fall. To determine if tunnels are active, flatten tunnels and examine in 24-48 hours. As moles begin to react to MOLE REPELLENT, increased tunneling activity may be noted. Active tunnels will reappear and should be re-flattened after MOLE REPELLENT is applied.

HOW TO USE: While you can apply MOLE REPELLENT evenly by hand, you may also use either a broadcast or drop spreader. The correct application rate, regardless of method, is one pound of MOLE REPELLENT per one thousand square feet. To initially set spreader, select a setting in the lower range of application rate. Then test setting by putting one-half pound of MOLE REPELLENT in spreader and apply to an area that is 500 square feet (25' x 20'). Readjust as necessary to reach the desired rate.

TREATING LARGE AREAS: While you can apply MOLE REPELLENT to your entire yard in one treatment, another strategy that has proved to be effective is to "move" the moles in the direction you'd like them to exit your property. To accomplish this, apply MOLE REPELLENT to one third of the area to be treated, beginning with the one furthest from the direction you want them to leave. If you want pests to move from your flower garden toward a fence, begin at the garden. Then (at one or two day intervals), apply the product to the other areas closer to the fence, ending with the one nearest to it. This approach is particularly effective when the area to be treated is larger than 100 feet by 100 feet.

WATERING IN: You can water MOLE REPELLENT in to speed its penetration into the soil, or you can let Mother Nature do it with the next rain. Over time the granules will decompose and release the repellent into the soil for a "time-released" treatment. Applying to wet soil works just fine too. The moisture begins the granule dissolving process and MOLE REPELLENT begins to leach into the soil almost immediately.

PRECAUTIONS AND FIRST AID: CAUTION. Since product can cause moderate eye irritation, the use of safety glasses is recommended. For certain individuals, prolonged skin contact may cause irritation. In case of eye contact, rinse with fresh water and seek medical attention. In case of skin irritation, wash with soap and water and call a physician if irritation persists.

STORAGE AND DISPOSAL: Store in original container in an area not accessible by children or pets. Do not reuse container. Discard in trash when empty.

NOTICE: Buyer assumes all responsibility for safety and use not in accordance with directions. All ingredients used exempt under EPA 40 CFR Part 180.

Covers up to 2500 sq ft

Net Contents 2.5 lbs
