

BULBS ALIVE!

Bulbs alive! Is a complete plant food for flowering bulbs. Bulbs need additional nutrients to help build the roots and produce flowers.

Ingredients:

Bulbs Alive! Is made from 100% plant and animal by – products. It provides all the essential nutrients needed for healthy bulbs and plants.

Uses:

Bulbs Alive! May be used outdoors for all spring and fall flowering bulbs such as tulip, hyacinth, daffodil, & corms such as begonias and caladium.

How it works:

Bulbs alive! Plant food provides the needed nutrients to ensure strong healthy blooms as well as healthy bulbs. It has immediate available nutrients and slow-release nutrients to help improve the soil.

Application:

Fall is the most important time to fertilize bulbs! The bulbs go through significant growth before winter to prepare for spring. Bulbs alive! Can be worked into the soil before planting new bulbs. Apply again as bulbs begin to emerge from the soil.

Note: Applying Bulbs Alive! After flowers open as a late fertilizer, may encourage bulb rot.

To apply when planting bulbs place ½ cup in the hole and mix with soil thoroughly before setting bulb. Bulbs Alive! May be broadcast over bulb bed at a rate of 5-7 lbs. Per 100 square feet. Mix well before planting bulbs.

To use when bulbs emerge or for bulbs already planted, sprinkle bulbs alive! Over the soil surface and mix with soil as thoroughly as possible.

Other considerations

Cats, dogs and other animals may be attracted to Bulbs Alive! Fertilizer. Water the fertilizer into the soil to decrease the temptation. Store in container with a lid.

Benefits:

Bulbs Alive! Is beneficial in building the soil and allowing the plant to get all the nutrients it needs.

Provides the extra nutrients needed to produce healthy, big blooms all season.

Only two applications are necessary for the season.
